

Amendments to the Specification

The paragraph starting at page 2, line 12 and ending at line 16 has been amended as follows.

The closer to the liquid crystal display area 16 the LED 15 is disposed, the brighter it acts as a back light for the liquid-crystal display panel 11; however, if the LED 15 is disposed too close to the liquid-crystal display panel 11, the neighborhood of the LED 15, acting as a light source, becomes too bright, thus generating unevenness in luminance.

The paragraph starting at page 4, line 3 and ending at line 9 has been amended as follows.

Hereinafter, a preferred embodiment of the present invention will be described in detail, by way of example, while referring to the accompanying drawings. However, it is to be understood that the measurements, materials, configurations, relative arrangements and the like of component parts described in the following embodiment are only illustrative ~~out and~~ and should not be construed as limiting the range of legal protection for the present invention in any manner, in particular unless specified otherwise.

The paragraph starting at page 4, line 24 and ending at line 26 has been amended as follows.

Fig. 2 is a perspective view of the display device that is a preferred embodiment of the present invention. In this figure, a case 3 (to be described later) is omitted for convenience of explanation.
